Garage Door Opener

Sectional Garage Door Opener

DF800N

800Nm

220V, 50hz

24V motor - Battery Back Up

With a **d-force™** you are assured of a reliable, safe and trusted garage door opening system.

- ⦿ Ultra-quiet operation featuring Soft Start & Soft Stop technology which will assist in extending the life of the opener.
- ⦿ The travel limit and automatic reverse are set to self-adjust. For added safety, the garage door motor has also been designed with Sensing technology which will stop the door from closing if the garage door senses any obstacle while in operation.
- ⦿ Includes a Stylish four button remote, perfect for multi-car families which can fit onto any key ring and can be carried around where ever you go, in your vehicle or even in and around the house. Rolling Code technology for transmitting signals to the motor has been used, to ensure the safety of your home.
- ⦿ Rolling Code technology assures a new code is sent every time the remote control is used.
- ⦿ Included in the system, is a handy wall console bracket to house a remote, the bracket can be fixed to the wall near your side entrance. From here you can easily observe the operation of the garage door and if need be, stop the opening or closing of the door immediately if a problem or passing through traffic such as children or pets has been observed.
- ⦿ The opener lights turn on automatically when the doors are operated from the wall remote or the handheld remote control.
- ⦿ With the many unexpected power failures in South Africa the Battery Backup will ensure you can get your vehicle out of the garage when needed, especially in emergencies. The battery Back-up system will allow you to use your garage door for approximately 24 hours, by this time your electricity should be back on.

Includes power head, shaft, two remotes, wall remote bracket, hardware & Owner's I Operation Instructions
